INDEX

9 *Introduction*

17 Chapter 1 - On teachers' subject matter knowledge

17 1. Why Are Questions About Subject Matter Knowledge Being Raised?
22 2. What Kind or Amount of Subject Matter Knowledge Do Teachers Need?
26 3. Is There Such a Thing as Subject-Specific Pedagogy, and if so, What Is it?
30 4. What Kind of Policies Address Subject Matter Knowledge?

35 Chapter 2 - Existing models of knowledge in teaching: developing an understanding of the Anglo/American, the French and the German scene

35 1. Mental-discipline theories
37 2. *Naturalistic* theories
38 3. *Apperception* theories
38 4. Conditioning and behaviourist theories
39 5. Cognitive theories
41 6. Structural theories
45 7. The Anglo/American scene
48 8. The Shulman model
50 9. The Ernest model
51 10. The model of Brown and McIntyre

52 11. Further models
54 12. The French scene
61 13. The German *Didaktik*
65 14. Concluding remarks

67 Chapter 3 - Grounded Theory as Scientific Method: Haig-Inspired Reflections on Educational Research Methodology
67 1. The Discovery of Grounded Theory
71 2. Haig's Thesis
71 3. Grounded Theory Background: break with traditional research methodology in social sciences
72 4. Haig's 'reconstruction of Grounded Theory
74 5. What is the significance of Haig's reconstruction of Grounded Theory for Research in Education?

77 Chapter 4 - The Grounded Theory in Education
78 1. The Grounded Theory as Reflective Practice
79 2. The Expert Reflective Practitioner
80 3. The Grounded Theory in Action
81 4. Grounded Learning as Applied in an Adult Literacy Context
84 5. The Building Blocks of Grounded Learning
84 6. Problem As Experienced in Practice
86 7. L'Explication du Texte": A relevance to summary skills
89 8. "Explication de texte" and its relevance to Grounded Learning
93 9. Mind/concept mapping and Grounded Learning
96 10. An Example of Grounded Learning in the Classroom
97 11. Evaluating Grounded Learning
101 12. Grounded Learning Techniques for Curriculum Planning
102 13. Conclusion

103 Chapter 5
Lakatos's Methodology of Scientific Research Programs
103 1. Lakatos's Theory
105 2. Points of Disagreement between Lakatos and Kuhn
106 3. Main Point of Agreement between Lakatos and Kuhn
106 4. Lakatos on Popper's Demarcation Criterion
107 5. A Puzzle about Prediction
107 6. Lakatos's Picture of Science
108 7. The Role of Background Evidence
108 8. Models
109 9. Solution to the Puzzle about Prediction

110 10. When Should One Model Supercede Another?
111 11. Lakatos on Revolutions
112 12. Lakatos's Demarcation Criterion
113 13. Musgrave's Criticisms of Lakatos

115 Chapter 6 - The Structure of Knowledge in School Subjects and its Implication for Classroom Teaching

115 1. Instructional and teaching methods
122 2. Four Types of Knowledge Structures
122 a) Fact-based Knowledge
122 b) Concept-based Knowledge
123 c) Language-based Knowledge
124 d) Value-Based Knowledge
125 3. Implications For Teaching
125 a) Fact-based subjects
126 b) Concept-based subiects
127 c) Language-based subjects
128 d) Value-Based subjects
129 4. Conclusion

131 Chapter 7 - Curriculum Research and Theories: Scenarios and perspectives for the teacher's professionalism

131 1. Teachers, Curriculum Reform and Schooling
134 2. The Curriculum, Change and Renewal
140 3. The Lakatos' methodology of Scientific Research Programs for comparing the best theories on curriculum
142 4. First distinctions: neutral models, justification models, philosophical models
143 5. Curriculum intended as a Body of Knowledge
144 6. Curriculum as a Product
144 7. Curriculum as a Process
144 8. Curriculum as a ractice
145 9. Curriculum as a context
145 10. The development of teacher's professional competences: perspectives and scenarios

149 **Chapter 8 - The cognitive structure of teaching: from subject as research to subject matter knowledge as teaching**
149 1. The curriculum modularisation and the formative profile
151 2. Formative profile, standards and quality indicators
153 3. Assessing the quality of education systems using 'systems of indicators'
158 4. How to constitute a formative profile
159 5. Our research program on the formative profile
164 6. What is the difference between Competency and Competence?
171 7. Competencies Mastery Systems
176 8. A summary to carry on
176 9. The conditions for expert learning
177 10. Expert models for an effective learning
178 11. The conceptual frameworks of a discipline
181 12. Homology and not only similarity between knowledge structures and learning proceedings
182 13. Regulation systems of disciplinary communication in the stage of didactic analysis
183 14. Curriculum flexibility
186 15. Curriculum and school autonomy
189 16. The curriculum and its strategic significance for the next generations' mobility
